

Work as a team in conference rooms equipped for collaborative sessions in a private setting. Call, present, and video conference with team members for a productive experience in a setting that has the tools to share digital content and include remote participants in a video call. All in-room and remote colleagues see one another and the content being shared via the room's large display. A table-top device and in-room meeting controls make it easy to start meetings and switch between presenters. Conference room deployments with audio conferencing and video conferencing (endpoint or soft codec) and table connections empower you to share content from your personal device with remote collaborators. The automated control system option simplifies the process of starting meetings and conferences.

- **4-8 participants**
- **UHD LCD Display**
- **Room scheduling**
- **Table connectivity**
- **Device control**
- **Video conference with remote collaborators**
- **Easy to display, share, and annotate content**
